KTM Myroon Prestige

KTM's Myroon Prestige is lighter than most road bikes. KTM's newly defined carbon monocoque technology makes possible a hardtail frame with the best stiffness-to-weight ratio (STW) of its class. The well-thought-out new KTM HE-FC-M-R frame makes the difference (only 1000 grams at 48 cm), as does the brand new disc brake caliper postmount. The very same race geometry as the Score (73° seat, 71° head) helps provide decisive propulsion.

KTM Lycan 1.0

KTM unifies the best of both race and all-mountain in the new Lycan 1.0, featuring the floating Pro-Damping-System2. KTM combines its new LRR (Light-Reliable-Rigid) frame with a full 120mm of travel to create a first-class tourer. Seat tube angle of 70 or 73 degrees available. Marathon today, crossing the Alps tomorrow? No problem at all with the new KTM Lycan 1.0.

GIGANTEX 20" Full Carbon Mini Bike

More than 90% of the parts for this 20" mini bike are made of carbon fiber composite materials, and all parts are designed and produced by Gigantex in Taiwan, making it an entirely Made In Taiwan product. Gigantex has combined multiple technologies and patents from over ten years of R&D to create the crank sets, handlebars and wheel sets. The complete mini bike weighs only 5.8 kgs, making it extremely easy to carry or transport. And although it is incredibly light, the stiffness and performance is more than enough for hill riding, racing, and leisure.

REACH IDEA JOINT Free Go Assembling Bike

The Free Go Assembling Bike is designed to be simple and convenient. No tools or special skills are needed to assemble or disassemble the bike quickly. The bike is also easy to carry or transport when disassembled.

☎ 886-4-23013579

ASAHI Multi-Function Folding Bike

Most people in Taiwan who take public transportation often encounter a significant problem: public transportation won't take them everywhere they want to go, forcing commuters to rely on cars or scooters at public transportation end points. For this reason, Asahi developed this multi-function folding bike to meet commuters' end-point transportation needs.

REACH IDEA JOINT

Free Go Quick Detachable Pedal

The quick detachable pedal is a fresh idea. Due to its unique design, these pedals can be detached and assembled quickly and easily. The released pedal can be plugged on the other side of the crank to save space. Detachable pedals make bikes easy to carry and store, yet are theft-proof as well. These pedals are suitable for all types of bike on the market.

A-PRO RDP

The RDP multi-pivot design allows for a fully engineered rear wheel travel path, leading to increased pedaling efficiency. Fine tuning and customizable shock rate give superior bump absorption and pedaling performance. The A-Pro RDP is an alternative to the popular Horst link design, with even better performance characteristics. Oversize tubes and attention to cross-bracing provide a stiff platform for superb handling.

GIANT TCR Advanced SL Road bike

TCR Advanced SL is the lightest, stiffest, best-performing road bike ever produced by Giant. More than 10 years after it changed the face of high-performance bicycles with its revolutionary Compact Road Design, Giant unveiled the latest-generation of TCR. A combination of PowerCore with Overdrive and Megadrive makes the framesets super stiff and boosts greater pedaling efficiency. TCR Advanced SL was ridden to more professional wins by High Road's Team Columbia than any other road bike during the 2008 season.

POST MODERNE

Mechanical Lock-out For Suspension Forks

This mechanical lock-out unit is designed for use in trekking/city bike suspension forks. It is a complete sub-assembly that is installed in a suspension fork depending on the needs of the customer (OEM company). This provides added value for OEM companies (flexible product levels) and a benefit for customers (added product function). The unit uses a combination of interlocking grooves and teeth to create a mechanical lock. An external control knob mounted on the top of the fork allows the rider to lock and un-lock the fork quickly with no tools. The system makes a clicking noise that tells the rider the unit is switched on and off.

EXUSTAR E-SR205 Sidewall Sole Shoes

Conventional cycling shoe soles are simply a platform for the foot, but the E-SR205 Sidewall Sole offers much more support by also partially encasing the sides of the foot. Using an advanced monocoque carbon fiber construction technique, the sole is built with varying degrees of stiffness and thickness in different areas. The sole is totally rigid, while the stiffness of the walls varies according to the degree of flexibility required. This translates into increased power transfer, greater comfort, and impact protection at a light weight.
